

- Pole Mountable
- Audible & Visual Warning
- Order code: 64598422

Description

The non-contact voltage detector is specifically designed to accurately detect mains voltages that may be present when testing PC400 fuses and associated cables at height with the use of operating rods

The device can be mounted on operational rods via the rose adaptor and will detect voltages precisely using a loud audible signal and two high intensity red LED's.

The unit can be easily self-checked against a known voltage source before use.

Specification

Threshold voltage	100 Vac
Power	1 x 9V battery
